

WELD PINS

Weld pins are used to attach insulation to metal surfaces. The pin is welded into place, the insulation is impaled over the pin, and then typically held in place with an insulation washer (speed clip). CD base weld pins are best installed with a capacitor discharge stud welder, while the double point pins are usually installed with an arc stud welder. We offer both types of units for purchase or rent.

- Mild steel, stainless steel and aluminum are the industry standard materials.
- Other materials available upon request.
- Pins can be made with sharp or blunt tip.

Specifications		
Material	Gauge Diameter	Length
Mild Steel	10-14 gauge	3/4"-21"
Stainless Steel	10-14 gauge	3/4"-21"
Aluminum	10-14 gauge	3/4"-21"
